

What is Healthy Planet?

Epic's population health module, **Healthy Planet**, enables organizations to improve overall patient quality and decrease the cost of care per patient. As healthcare moves from a fee-for-service to a value based care model, efficiency in management of high-cost and high-risk patients is a necessity. With Healthy Planet you can:

- Improve quality of care for patients with a specific disease.
- Manage high-risk patients with multiple comorbidities.
- Safeguard the wellness of your overall patient population.
- Manage care transitions for patients across the care continuum.

Why Healthy Planet?

Healthy Planet provides tools required for several components that are required for population management. This includes population analytics and reporting, patient outreach and care management, care planning and coordination and patient engagement.

Implementation of a successful population health strategy can help your organization to:

- Incorporate outside data from claims, cost accounting systems, patient satisfaction surveys, and other EHRs into actionable analytics and care management workflows.
- Analyze cost and quality for the entire organization or for specific populations by stratifying patients by risk and focus on patients of the highest risk or cost.
- Track and manage high-risk patients and ability to use evidence-based protocols and clinical decision support on a wide range of patient's medical information.
- Communicate and coordinate care management efforts with a patient's care team through integrated documentation and clinical decision support in the electronic medical record.
- Extend your analytics arm to affiliates by showing your physician partners how they are performing in the ACO and benchmarking quality measures.

Why Contineo?

- Proven experience in Epic Healthy Planet implementations for multiple ACOs.
- Functional and technical experience with building various quality and compliance measures (MU, MACRA/MIPS etc).
- Custom Workflow analysis, Build & Optimization including recommendations to increase efficiency in any given inpatient or outpatient setting.
- Dashboard development to provide clinic managers with up-to-date population data for meeting and not meeting CMS requirements.
- Expertise in Epic Caboodle (Epic's Clinical DW platform) that brings together clinical, financial and operational data from Epic and other 3rd party systems
- Robust and comprehensive training plan and documentation for client team; focused on job roles rather than just basic Epic training.
- Consulting team with multiple Epic certifications in various modules including Epic Ambulatory, MyChart, Security, Care Everywhere, Clarity, Caboodle etc.
